DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4,6-8 and 11-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Grosswiller et al (5,584,560).
3. Grosswiller discloses:
 - A housing including a first end; a window in the first end of said housing (21); a lamp disposed within said housing so as to emit light through said window (15); a shaft; and, a positioning assembly secured to said housing;
 - The positioning assembly including: a first motor operable to rotate said housing in a first plane with respect to said shaft, and a second motor operable to pivot said housing in a second plane with respect to said shaft (col. 2, lines 47-50);
 - The first and second planes are different, the first and second planes are substantially perpendicular to each other (horizontal, perpendicular are inherently perpendicular to each other);
 - The housing is substantially cylindrical (11), a vertical adjustment assembly including first and second perpendicular tubular members and a planar portion, said first motor is secured to said planar portion, and said shaft passes through said first tubular portion (fig 5);

- A horizontal adjustment member including a recess for at least partially receiving said second tubular portion and said second motor (fig 5),
- A first gear secured with respect to said shaft, and a second gear being rotatable by said first motor, whereby operation of said first motor causes said first and second gears to engage and rotate said assembly about said shaft in said first plane (fig 5);
- A first section gear being fixed with respect to said positioning assembly and a third gear being rotatable by said second motor, whereby operation of said second motor causes said first section gear and said third gear to engage thereby causing said third gear to travel along said first section gear and pivot said housing in said second plane (figs 8a-c).
- A controller electrically coupled to said first and second motors for selectively operating said first and second motors to orient said window so as to emit light in a plurality of directions in said first and second planes (24).
- A controller secured within said housing and electrically coupled so as to selectively operate said first and second motors (24).

Allowable Subject Matter

4. Claims 14-19 are allowed.
5. Claims 5,9 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: The prior art cited does not disclose the following:

- An elongated neck, wherein said shaft passes through said neck into said housing;
- A washer including a plurality of tabs positioned so as to limit said rotation of said assembly by said first motor;
- The rotation is limited to approximately 380 degrees;
- A section gear secured with respect to said body and engaged by said third gear; wherein, operation of said first motor rotates said assembly about said shaft and operation of said second motor pivots said assembly with respect to said shaft.
